

Hands-on Session on Android App Development

18th January 2018

Getting Started with Android App Development

Ahoy!

Post successful installation...

The following links are all you need to build apps:

(Thank me later)

[Android Developer](#) & [Stack Exchange](#) || [Stack Overflow](#) (Of course)

Let's have a quick Tour first. Huh?

Check [this](#) out!

What is Frontend and Backend (For peeps who are brand new to development)?

[FrontEnd Vs BackEnd In Android](#)

Now Let's get a tad bit specific.

See what a view is [here](#).

In order to further understand the idea of layouts... Check out the video attached to this email.

The video displays how any screen in Android is broken down into View, View Groups, and Layouts.

Perhaps go through [this](#) link, before you browse the video.

Go, watch the video, I'll wait.

Some words that you missed out on. Don't worry, here is a [Vocab Collection](#) just for you.

Other links:

[Cheat Sheet](#)

[Best UI](#)

If you think you've done plenty of studying and are kinda tired... Let's jump onto some real code.

[Here](#) is a link to a youtube tutorial with step by step description to building your first app. If you face any issues though or even if are completely lost, don't you worry, we'll do this in the session as well.

That's is.

You, my dear friend, are all set for the workshop!

See you on Thursday!

:)

*Let's get started with Android App Development. A session held by ACM-Student Chapter IGDTU.
