

## Hands-on Session on Android App Development

18th January 2018

*'Post-session Talks'*

*Ahoy!*

Was so glad to see the turn up of students. Hope you actually found the session useful, and perhaps takes you a step closer to your respective goals!

Sadly, we could not cover up the part where we'd actually build an app, but the links as shared [here](#), would be of use, to build apps, also, I strongly recommend the various online courses @edx, udemy, udacity, coursera.

Now, regarding the **certification**, ACM-Student Chapter shall conduct a brief test, and a set of problem sets. On the basis of the results, we shall issue a 'Certificate of Merit' to the worthy students. The test would be conducted in March (after Minor-I) and the problem statements will be rolled out.

Secondly, regarding the **project** that I mentioned during the session, we are still in discussions on how to proceed with that! I'll share more information regarding the same before Jan 25th.

I hope this covers up all queries, if you think I missed out anything or, rather want to stop receiving these emails, kindly personally message me on WhatsApp.
